

QA: Procurement of a consultant for the EITI database project

Q1: *Could you please provide the mockups for the design that will need to be implemented?*

A1: The EITI Database design will be in line with the existing EITI State Owned Enterprises Database: <https://soe-database.eiti.org/>. We will share internal branding guidelines with the successful consultant.

Q2: *Can you provide additional info about the current process of importing data into the SOE Database (into Datasette)*

A2: The current process for importing data into the SOE database uses a customised version of the Datasette-upload-csvs plugin (found at <https://github.com/civilliteracies/datasette-upload-csvs>). This provides authenticated users with options to upload new tables, or to append/overwrite existing ones. It also exposes API endpoints for the programmatic upload of data. Currently this process is stand-alone and not integrated with any other systems. Documentation on this process, the existing schemas, and the methodology for creating or matching company IDs will be made available to the successful bidder.

Q3: *Is there a limit of total pages for the Technical Proposal document?*

A3: We encourage proposals no longer than 10 pages.
