

WHAT IS ENERGY TRANSITION?

Energy transition is the global shift from fossil fuels like oil & gas to cleaner energy sources such as solar & wind power. For Ellembelle, home to some of Ghana's major mining and gas processing facilities, this change brings both challenges & opportunities for our community's future.

Tomorrow brings new energy sources & possibilities for our community while changing how we use our current resources

WHY IS THIS IMPORTANT FOR ELLEMBELLE DISTRICT?

Jobs and Economy

Our district's economy & employment currently depend on natural gas facilities. Understanding energy transition helps us prepare our workforce & businesses for future changes.

Revenue Planning

As global energy sources change, the district assembly needs to plan for potential changes in revenue from our gas installations, ensuring continued development of our communities.

New Opportunities

Energy transition brings possibilities for new industries, skills development, & investment in renewable energy projects that could benefit our district if we prepare early.
